New Skin Packaging Machine Applications are out there. Have you found yours?

Starview's ASP-2430 Skin Packaging Machine with automatic in-feed, moving template loader and automatic out-feed.

Starview announces another innovation in Skin Packaging Systems. First it was the optional Three Stage Vacuum System mid last year. We are now pleased to introduce our versatile automatic out-feed system option.

Starview's ASP Series Skin Packaging Machines feature an automatic in-feed station including a template loader that travels with the skin card and product onto the vacuum box. Once the skin card is in position the template lifts up and returns to the in-feed station.

Our new out-feed station is carriage mounted on hardened and ground tracks. The electric drive is quick and accurate. This system pulls the finished skin card out of the vacuum box, pauses while the hot wire cut-off activates and releases the skin card to a fixed table or motorized conveyor. If the card is released to a motorized conveyor, we can provide at additional cost a PLC timer and output circuit to activate the conveyor for a specific amount of travel once the skin card is released. Due to the open nature of the out-feed, the conveyor may be placed in parallel or at a right angle to the machine flow.

A short video of this machine is available on our website in the automatic skin packaging machine section.

Which one of your customers needs to update a current skin packaging system for greater automation or purchase a new system that will compliment existing production?

Starview launches *New Rental Program.*

Yes, you read that correctly. Effective immediately we have in place a rental program for the most popular machines we produce. You may now offer your customers high quality Starview machines for use with a minimum of cash outlay. The machines being offered in our rental fleet are:

- ★ **MR2-1418** Two-station manual rotary blister sealing machines.
- ★ **ERB6-1418** Six-station semi-automatic rotary blister sealing machines.
- ★ **PHS6-1418** Six-station semi-automatic rotary Plastic-to-Plastic clamshell and blister sealing machine. Includes chiller mounted in base of machines.
- ★ **SP-1824** Semi-automatic, impulse heating skin packaging machines.
- ★ **SP-2430** Semi-automatic, impulse heating skin packaging machines.
- ★ **SP-2436** Semi-automatic, impulse heating skin packaging machines.
- ★ **RP28-2** Roller die cutters for use with any of the above skin packaging machines, upper & lower pressure rollers powered for improved cutting registration.

Machines offered in the program are typically base model machines without options unless noted.

Please contact steve@starview.net for a PDF describing complete program details.

Let Starview assist your customers with machines designed to make the total manufacturing process more effective. Contact one of our sales staff for packaging solutions to help your customers reduce cost and stay competitive.
